

New Hold and Save Function on the Elcometer 319 Standard Dewmeter

The Elcometer 319 Standard Dewmeter (**G319----S**) has been updated to include a Hold and Save function.

This new feature allows the user to manually freeze and review a reading before saving that reading to the gauge rolling memory.

Should the held readings not be required then they can be discarded without being added to the rolling memory of the gauge.

Working in a similar way to the Elcometer 319 Top, this additional function enhances the flexibility of the Elcometer 319 Standard at no additional cost.

Products manufactured from the 1st April 2011 onwards with serial numbers beginning "LD" or later will include this new feature.
